# Against Ethnicity: Democracy, Equality, and the Northern Irish Conflict

## Introduction

In a pioneering book on the start of the Troubles, Niall Ó Dochartaigh argues that the "outbreak of conflict in Yugoslavia" made it "much more widely acceptable to analyse the situation in Northern Ireland as an ethnic conflict." The Troubles looked "like a vision of a common European future."<sup>1</sup> By the end of the twentieth century, ethnic approaches to understanding conflict had become intellectual common sense.<sup>2</sup> Far from being a statement of the obvious, though, describing twenty-first-century conflict in ethnic terms was clearly becoming a distortion of reality. The era of ethnic pandemonium predicted by some commentators after the fall of the Berlin wall did not arrive.<sup>3</sup> In fact, the number of civil wars taking place around the world has fallen into steep decline. The Cold War had not contained internal conflicts but had instead encouraged them: these years had seen a steady increase in ongoing civil wars. When superpower support ended, outbreaks of civil wars went down and terminations of civil wars went up.<sup>4</sup> The armed conflicts in what had been Yugoslavia came

to a close themselves at the start of the century, with a non-violent revolution -- an ending that calls into question whether the story should still be read as an ethnic tragedy.<sup>5</sup>

Before Slobodan Milošević was toppled, scholars from a range of disciplines -- among others, the historian Richard Bourke, the political scientist Stathis Kalyvas, and the sociologist Rogers Brubaker -- had already begun to tear down ethnic interpretations of internal conflict. Inspiration was often taken from the academic arguments that had brought about "the fall of class" a decade or so earlier.<sup>6</sup> Just as ethnicity takes center stage in studies of twentieth-century Ireland, class used to be the actor around which the drama of nineteenth-century Britain was written.<sup>7</sup> In his essay "Rethinking Chartism," Gareth Stedman Jones sought to escape "the gravitational pull exercised by the social interpretation." Starting "from what Chartists actually said or wrote" rather than with the concept of class consciousness, he

took their preoccupation with politics seriously.<sup>8</sup> With this essay, Stedman Jones spearheaded a return to politics. Political ideas and institutions were no longer seen as spume on the wave of social and economic realities.<sup>9</sup> The political is a distinct sphere of human activity where the terms of the life in common are debated, laid down, and contested. It is made up of interrelated sites, which range from street protests in a neighborhood to strategies played out in a formal international organization. Action presupposes thought. So, political struggle has to be studied in its intellectual context if individuals are to be credited with having agency.<sup>10</sup>

For Bourke, the Troubles was a contest "over the meaning of popular sovereignty."<sup>11</sup> Most scholars of modern Ireland, however, still examine the past through the ethnic lens. This may be because they cannot actually see that the ground has gone from beneath them. "Theory-induced blindness," as the psychologist Daniel Kahneman calls it, sets in once a

theory has been widely accepted and found to be a useful tool for reasoning.<sup>12</sup> So, on the rare occasions they get cited, Bourke's *Peace in Ireland* is usually misrepresented as a general history of the Troubles and Kalyvas's research tends to be applied selectively.<sup>13</sup> Doubting is harder work than believing.<sup>14</sup> Scholars will not quickly and easily put down the old tools which have served them so well. This article will therefore not set out to prove that the ethnic-conflict interpretation is "false" and that the model based on the problems of giving practical expression to the principle of democratic sovereignty is "true." It will instead attempt to show that the former set of tools is unwieldy and that the latter set is much more effective and delivers far better results.<sup>15</sup>

This article is divided into four main sections. The first of these highlights the flaws in general theories of ethnicity as they relate to internal conflict and political violence. The second section goes on to offer brief critiques of the bespoke interpretations of violent conflict in modern Ireland put together by Tim Wilson and by the sociologist Joseph Ruane and the political scientist Jennifer Todd. Wilson's model, it should be noted, is built out of his research on Ulster between 1918 and 1922, but he nonetheless makes clear that he thinks it

applies to the Troubles, too.<sup>16</sup> The first two sections focus firmly upon ethnicity; however, the basic criticisms also hold for other terms associated with nationalism such as race, sect, and culture. Applying these terms to internal conflicts and acts of violence produces descriptions, not explanations. They can account for neither individual behavior nor collective action. Ethnic, racial, sectarian, and cultural groups are all abstractions. The third section moves on to the new political approach. Drawing on the work of intellectual historians from the Cambridge School, this section sets out a very short history of the idea of modern democracy and it examines the concept's capacity for creating conflict. The final section uses previously unseen and overlooked archival sources to show how the new set of tools comes much closer than the old one to capturing the complexities, contradictions, and ambiguities of conflict and violence in Belfast at the start of the Troubles. It begins by detailing how the parties to the overarching conflict were mobilized by rival understandings of democratic legitimacy. In this way, modern democracy brought a degree of consensus to the divided politics of Northern Ireland because the parties put the same ideas and language to use. The section concludes by exploring other violent incidents from this time and place. Where ethnic interpretations class such acts as either ethnic or criminal, this article argues that they should instead be seen as conjunctions of the political and the private.

### **Ethnicity Is What?**

By the time the first major academic accounts of the early Troubles appeared at the turn of the century, their authors had already come to assume that the concept of ethnicity was so

---

<sup>16</sup> T. K. Wilson, *Frontiers of Violence: Conflict and Identity in Ulster and Upper Silesia, 1918-1922* (Oxford, 2010), 215-6 and 219-20; Tim Wilson, "Frank Wright Revisited," *Irish Political Studies* 26, no. 3 (August 2011): 277-82.

widely known that their readers did not need to have it defined.<sup>17</sup> But, the lack of a definition matters here. Causal claims which tie together properties related to ethnic identity with, say, violence cannot be taken as reasonable ones until it can be shown that these properties are linked uniquely or even disproportionately with ethnicity. "We cannot," the political scientist Kanchan Chandra points out, "talk about what ethnicity does unless we first address the question of what ethnic identity is."<sup>18</sup> However, this proves a surprisingly difficult first step to take.

Some scholars of modern Ireland have chosen to adopt the definition worked out by the political scientist Donald Horowitz.<sup>19</sup> In his "seminal text," *Ethnic Groups in Conflict*, Horowitz holds that "Ethnicity is based on a myth of collective ancestry."<sup>20</sup> This definition, though, does not even match the classification used in the book in which it appears. Hindus

and Muslims in India, Christians and Muslims in Lebanon, and Creoles and Indians in Guyana and Trinidad do not have a myth of common ancestry, yet Horowitz classes them all as ethnic categories. Admittedly, "Catholics" and "Protestants" in modern Ireland can be said to possess such myths. But, for a myth of common ancestry to be the *primary* defining characteristic of an ethnic group, the successful reception of this myth could not rest upon any other characteristic that also distinguishes members. Common ancestry is, of course, a meaningless way of defining group membership.<sup>21</sup> Dramatically narrowing the focus does not make it into a definition which works, as even members of a nuclear family can be classed as belonging to different ethnic groups. A *myth* of common ancestry is not troubled by such problematic facts. However, while myths are made not born, they are present at their making -- constructed out of the materials to hand. Some criterion external and prior to the myth is also needed as a guide to which of these ingredients should be stirred into the story.<sup>22</sup>

Any proposed definition based on a common culture again fails to capture the way ethnic groups are typically classified. Once more, however, the definition does seem to work for "Catholics" and "Protestants." "The seminal text here," writes Wilson, "is Fredrik Barth's introduction to...*Ethnic Groups and Boundaries*."<sup>23</sup> Barth argues that "cultural features" are employed as "signals and emblems of differences," creating and maintaining boundaries that

incorporate and shut out.<sup>24</sup> But, such cultural features can rarely serve as the *primary* defining characteristics; they generally need to be backed up by descent-based attributes. Indeed, Barth's own post-war case study of the "Pathans" suggests that this identity could not be constituted simply on the basis of "act[ing] out core Pathan values." "The acceptance of a strict patrilineal descent criterion," he concedes, "is universal."<sup>25</sup> Parentage was key in Ireland, too, during the twentieth century. The *Ne Temere* decree issued by the Roman Curia in 1907 required the children of mixed marriages to be raised as Roman Catholics.<sup>26</sup> Baptized Protestants who converted to Roman Catholicism and took up the Irish nationalist cause were not accepted on the other side of the boundary, even though they were performing the core values.<sup>27</sup> Descent counts more than culture.<sup>28</sup>

Chandra argues that ethnic identities belong to a wider set of "categories in which descent-based attributes are necessary for membership."<sup>29</sup> As ethnic identities are defined *only* by the "attribute-descent rule" for membership, an individual does not have a single,

fixed ethnic identity. Everyone has a range of nominal ethnic identities, those categories in which an individual qualifies for membership due to the attributes s/he has. Ethnic identities are activated when an individual claims membership in a category or when s/he is placed into one by others. Chandra divides descent-based attributes broadly into three types: those to do with genetics such as skin color; those which come through cultural inheritance such as the religion of parents and earlier generations; and those which are acquired as markers of that heritage such as schooling. A set of rules is also required to separate out ethnic categories from other descent-based ones a. Ethnic categories need to be large enough for membership to be impersonal, so as to distinguish them from family. They have to make up just a part of a country's population. If one sibling is eligible for membership at any given place, then all the other siblings must be as well. The qualifying attributes for membership have to be limited to physical features and/or to the religion, sect, language, dialect, tribe, clan, race, nationality, region, and caste of parents and ancestors. As Chandra acknowledges, these rules are arbitrary. They are simply required so as to have her definition match the standard classification and make it possible to determine what properties can and cannot reasonably be related to the concept of ethnicity. Afterwards, scholars can choose to discard them -- along with, possibly, ethnicity itself.<sup>30</sup>

Chandra picks out two properties intrinsically associated with an ethnic category: constrained change and visibility. Ethnic identities can change, even in the short term, yet only within the limits imposed by fixed sets of descent-based attributes. A practiced observer should be able to tell which key attributes an individual has. However, such observers will not always interpret the categories that these attributes identify in the same way. An identical skin-color shade will be read as "black" in the United States -- where there is a polar system

---

<sup>30</sup> Chandra, "What Is Ethnic Identity?" 58-63.

of categorization -- but as "brown" in Brazil -- which has a system of categorization based on a color continuum.<sup>31</sup> Interpretations can also change over time. Brazilian census results show a sizeable shift since the 1960s from the categories of Branco ("white") and Preto ("black") to Pardo ("brown"), in large part because people revised the way they identified themselves.<sup>32</sup> Categories are constructed, re-constructed, and discarded -- a process that is bottom up as well as a top down.

Most scholars working on how ethnic groups are formed accept basic constructivist assumptions: individuals have multiple identities, which can change, as the result of historical developments. Nonetheless, most of those researching the effects of ethnicity upon politics have yet to apply these insights. Arguments to do with democratic instability and with violent conflict end up resting upon ethnic identities having to be fixed. Democracy, goes the typical line of reasoning, has to have fluid majorities and minorities if the system is to sustain people's support. Societies divided along ethnic lines generally produce "permanent" majorities and minorities, undermining people's support for the system as a whole and encouraging some of them to step outside its rules.<sup>33</sup> The existing literature tends to see such competition and antipathy between ethnic groups as bringing with it the threat of violent conflict. Marc Mulholland, for instance, maintains that the Troubles was a "continuation, and

<sup>33</sup> Chandra, "Introduction," 38-9.

intensification, of the communal struggle."<sup>34</sup> Ethnic identities during a violent conflict are taken as being fixed, automatically salient, and what determines political behavior.

Individuals, writes Kalyvas in summary of this position, "will act in support of organizations claiming to represent their ethnic identity -- so much so that individuals and organizations can be conflated into a single actor, the 'ethnic group'."<sup>35</sup> The result is to drain politics from political violence.

Fixity is the property on which these two models depend, but it cannot by definition be intrinsically associated with an ethnic category. Ethnic readings of the Troubles either overlook or sidestep this issue. The political scientists John McGarry and Brendan O'Leary argue that ethnic identities are durable -- which means they can be treated as if they were fixed.<sup>36</sup> If they are durable, then this is a puzzle which needs to be solved rather than a fact which can be taken for granted. The answer offered by the anthropologist John Nagle and the political scientist Mary-Alice Clancy is that "Conflict hardens identities."<sup>37</sup> Yet constructivism's viability as a theory requires identities to be capable of softening, hardening, and remaining unchanged.<sup>38</sup> So, constructivists in principle end up as primordialists in practice.

<sup>38</sup> Kalyvas, "Ethnic Defection in Civil War," 1046.

A second way of defining the term primordial is to focus on attachments. "One is bound to one's kinsman, one's neighbor, one's fellow believer," writes the anthropologist Clifford Geertz. These "primordial bonds" "seem to flow more from a sense of natural -- some would say spiritual -- affinity than from social interaction." As a "primordially-based 'corporate feeling of oneness' [is for many] the meaning of the term 'self' in 'self-rule,'" Geertz argues that "a sovereign civil state" brings with it the risk of "communal uproars."<sup>39</sup> McGarry and O'Leary are primordialists in this second sense. The pair's ethno-national communities are so strong and long-lasting because they are based on the "givenness" of kinship bonds.<sup>40</sup>

Political conflict, however, cannot be ripped out from its intellectual context.<sup>41</sup> People consciously construct political ties out of normative principles and modify them under the pressures of the political process. Collective action requires political organizations and ideologies.<sup>42</sup> Ethnic conflict therefore cannot reasonably be distinguished from political conflict. Indeed, during the course of the Troubles, individuals who supposedly possessed the same ethnic identity/ties did not behave in the same ways. Some "Catholics" joined the security forces and some "Protestants" campaigned and, on occasion, fought for a united Ireland. Individuals could even change sides: a small minority of Provisional IRA volunteers

became British spies and informers.<sup>43</sup> Such "defections" matter even though the low numbers involved would at first suggest otherwise. Human beings are not fully rational, so the fear of "defection" was not proportional to the probability of the threat.<sup>44</sup> The Provisional Irish Republican Army (IRA) targeted for death or assault hundreds of people from the community that it claimed to be defending.<sup>45</sup> This "Catholic"-on-"Catholic" violence undermines the argument that so many different individuals and organizations can be treated as if they were a unitary actor.<sup>46</sup> The number of "defections," moreover, may have in fact been higher -- much higher. The political scientist Kevin Bean contends that from the late 1980s onwards twisted policy paths created the political space for the Provisional Republican movement to work with the British state. Pro-Agreement Republicans did not become "Protestants," yet they still gave up in practice their claim to be the legitimate rulers of the island and went into coalition with unionists to govern part of the United Kingdom.<sup>47</sup> Political ideas and institutions should no longer be seen as spume on the wave of ethnic realities.

### **Home-Grown Theories of Ethnic Conflict**

<sup>47</sup> Kevin Bean, *The New Politics of Sinn Féin* (Liverpool, 2007).

Neither Wilson nor Ruane and Todd simply apply existing models about the effects of ethnicity. Instead, they have drawn on general theories to develop arguments for a particular time and place. Wilson's "starting point" is that Ulster society from the seventeenth century onwards was divided between "two clearly-defined communities." When their struggle to dominate each other turned violent -- which it did every decade or so -- killers selected victims as "representatives of their community, not as individuals." Everyone could be identified as belonging to one of the two ethnic groups; everyone was a potential victim; everyone had a reason to be afraid. The tit-for-tat cycles of representative violence had by the end of the nineteenth century led to the emergence of "deterrence communities." Periods of peace were simply cold wars. However, "the trouble with deterrence threats," as Wilson explains, "is that sooner or later they have to be acted upon." Each side in these violent conflicts was seeking to force the other one to back down by inflicting unbearable levels of suffering and by showing it could take the pain.<sup>48</sup>

Wilson concludes that "conflict on the ethnic frontier" operated "essentially like a large-scale system of feud."<sup>49</sup> This point is not developed much further, so it helps to read *Frontiers of Violence* alongside the sociologist Roger Gould's work on violence in American cities and on Corsica. Between 1980 and 2008, strangers were to blame for only 22 percent of homicides in the United States for which the victim/offender relationships were known.<sup>50</sup> Most murders involve lovers, family members, friends, acquaintances, or neighbors. Motives

for a very large proportion of these killings seem to be trivial matters. Gould sees in these facts signs that "interpersonal violence [is] a product of social relations." Intimacy necessarily entails frequent contact between individuals and these interactions end up generating informal hierarchies. Though informal, these hierarchies are not insignificant -- as is shown by the value that humans have placed on honor, respect, and popularity. Conflict arises when an existing hierarchy is challenged; competition over social status tends to happen when people think the rankings have become unclear. Gould holds that groups relate to each other in much the same way as individuals do. During times of political instability, some groups view the resulting disruption to social relations as a ladder to a higher ranking.<sup>51</sup> Such a pattern appears to apply to Northern Ireland, where -- as Wilson points out -- the Irish Revolution, the labor militancy of the mid-1930s, and the civil rights movement all coincided with serious rioting.<sup>52</sup>

Drawing parallels with feuding societies, however, also draws attention to a flaw in Wilson's reasoning. There is more rather than less interpersonal violence in these societies, even though individuals know that this carries the risk of sparking collective violence. Gould believes this is because people also have individual interests that set them apart from fellow group members and that they set above the common good.<sup>53</sup> While Wilson does recognize that "personal feelings of hatred and revenge" play a part in "grassroots violence," he nonetheless minimizes their importance. Between these base emotions and the "political stratosphere" lies, according to Wilson, the much larger space of ethnic struggle. He insists

<sup>53</sup> Gould, *Collision of Wills*, 116, and 118.

that "any member of an opposing community will do as a victim."<sup>54</sup> Indeed, the concept of ethnic conflict can only make sense if group members could have been switched for each other. On those occasions when victims were targeted for motives that went beyond group attributes in any way -- a low threshold to meet -- the violence cannot then be classed as simply ethnic.<sup>55</sup>

Individual interests pose internal obstacles to group unity as well. Bourke, though, is the only scholar working on the conflict in modern Ireland to even reference Mancur Olson, the economist who formalized the "collective action problem."<sup>56</sup> Put simply, the problem is that "rational, self-interested individuals will not act to achieve their common or group interests."<sup>57</sup> Explaining the outbreaks of collective violence on the streets of Belfast requires this problem to be either resolved or reformulated. Wilson's answer is polarization. Everyone living in the northeast of Ireland clustered around one of two distant poles; in times of rising tension, people were pulled closer together in groups and groups were pushed further apart. For self-interested individuals, the rational choice here was to seek their own personal security through collective action. As a result, writes Wilson, "party politics faithfully reflected communal polarization" and each community "entertained a strong sense of ownership over its 'defenders'." Whenever this cold war turned hot, the violence "jump[ed]

back and forth between the poles of rival communities."<sup>58</sup> Although polarization provides a plausible explanation, it is open to a number of challenges. Drawing upon evidence from the early Troubles, Bourke demonstrates that "hostility was an effect of conflict rather than its cause."<sup>59</sup> And in societies where there are high levels of division, research suggests that this has not significantly increased the likelihood of violent conflict.<sup>60</sup> Moreover, polarization does not appear to be simply black and white: there is always a swathe of gray between the two poles where the majority of people cluster. Individual and group interests will only ever be tightly aligned for a small minority. There is wide variation, too, in the emotions the same situation can elicit. Furthermore, people will not respond to identical emotions in identical ways.<sup>61</sup> Anyway, as Bourke underlines, "common feeling is not sufficient to unite individual wills into a coherent plan of action."<sup>62</sup>

The concept of polarization owes much to the ideas of Carl Schmitt. Wilson alludes to the philosopher's famous dictum when he argues that "security depended upon enforcing clear-cut distinctions between friends and enemies." The friend-enemy distinction, according to Schmitt, "denotes the utmost degree of intensity of a union or a separation": the

willingness to die for the group and to kill members of the other group. All political actions and motives can be reduced to this ultimate distinction. Wilson comes very close to endorsing this position, not least in his statement that "To know the communal identity of the victim was to know the communal identity of the perpetrator."<sup>63</sup> The communal divide has for over a century shaped everything; nothing in that time has re-shaped the communal divide. In this effectively static interpretation, explains Bourke, "antagonistic communities preserve their group integrity as they seamlessly progress through history, transmitting their hostility down the generations."<sup>64</sup> Polarization for Wilson acts as a protective bubble. But, of course, the concept cannot take the pressure that this places upon it: the bubble bursts. This leaves Wilson violating the basic constructivist assumption that identities can change as a result of historical developments.

In Wilson's static society, space stays the same. It has to because the argument is built upon the political scientist Frank Wright's concept of the "ethnic frontier."<sup>65</sup> These are, in his words, "places where the populations of citizens and natives were fairly evenly balanced." "Citizens" have ethnic ties to the dominant group in the metropolitan center; "natives" may or may not have ethnic ties to the majority population in a bordering state. Wright takes four of his cases from East Central Europe -- Bohemia and Prussian Poland -- where from the 1880s onwards contemporaries were using the term "language frontiers."<sup>66</sup> Recent scholarship that draws upon Brubaker has shown that these were discursive rather physical spaces. "Far from

constituting sites of daily battles between nations," writes Pieter Judson, "so-called language frontiers were often populated by rural people who did not automatically translate division in language use into divisions of self-identification." Using a language was instead a functional question, and a range of both formal and informal institutions had been created to bridge the gap.<sup>67</sup> Here were spaces in which people lived, worked, traded, socialized, and slept together -- regardless of what language they first spoke to their parents.<sup>68</sup> Nationalist activists, in their struggle to make everyone else national, found themselves frustrated again and again by how people resisted being put into their categories. "On the language frontier," Czech nationalists complained in 1908, "we must not only fight with the Germans, but also with renegades and with Czech apathy and national indifference."<sup>69</sup> These conflicts were contingent and political rather than as the natural outcome of underlying ethnic realities. The gradual expansion of the franchise in Imperial Austria had resulted in political movements competing with each other to mobilize ever more people. Nation building was in effect party building, and it required the same levels of commitment and patience.<sup>70</sup> Neither identifications nor frontiers were stable and fixed.

Wright's depiction of imperial space as fixed has been superseded, too. Undercutting the metropole-colony divide, Tony Ballantyne has argued that the British Empire should be

viewed as "a complex agglomeration of overlapping webs." Individual empire builders were constantly spinning new threads, often in response to old ones being broken or destroyed. Irishmen and -women, from all backgrounds, made up a sizeable proportion of those who took up the opportunities and on the risks presented by this dynamic environment.<sup>71</sup> The movement of people, goods, and ideas around the empire was not only tying points in imperial space to London, it also was tying them directly together with each other.<sup>72</sup> Irish economic, social, cultural, religious, and familial networks flowed through the whole empire rather than just to Britain and back. For Catholic Churches in the English-speaking world and Catholic missions in Africa and Asia, it was Dublin rather than London that was the central node in their spiritual network.<sup>73</sup> Empire also shaped resistance to it. Nationalist and anti-colonial actors sought each other out to share experiences, ideas, and resources.<sup>74</sup> In this

networked space, identifications and places were more the unique and ever-changing comings together of many different trajectories than they were stable and bounded entities.<sup>75</sup>

Regional and transnational studies are two of the ways historians have been trying to jump over the shadow of the nation. This problem was created, in part, by the discipline itself: most historians had been nation builders in the nineteenth and early-twentieth centuries. By contrast, from the 1940s onwards, historians believed their profession was waging what T. W. Moody called a "war against servitude to myth."<sup>76</sup> However, Moody did not question that a people had a connection to its collective past; he was seeking to replace a fictitious version of that link with the real thing.<sup>77</sup> Even after the discipline moved on to picking apart imagined communities and collective memories, most scholars still wrote as if peoples were the subjects and agents of European history.<sup>78</sup> Nationalists, though, had built peoples as well as nations. While they insisted a "new" or "revived" nation came out of an

"old" people, activists were, in fact, developing both these concepts in conjunction.<sup>79</sup>

Scholars have too often taken these political claims to common ancestry as evidence of real continuities across time.<sup>80</sup> Wilson describes the "Catholic/Protestant confrontation" as taking "shape" in the seventeenth century and then displaying "extraordinary longevity."<sup>81</sup> But, as Louis Cullen has demonstrated for the eighteenth century, the "abstract Irish 'catholic'" and the "abstract Irish 'protestant'" "did not exist."<sup>82</sup> National -- if not *nationalist* -- readings of the past replace the overlapping webs traced by protean and shifting loyalties with non-political ethnic groups.<sup>83</sup>

Brubaker warns against even treating ethnic groups as "things in the world": "substantial entities to which interests and agency can be attributed."<sup>84</sup> According to this interpretation, when Wilson writes "it took until June 1922 for the Catholic community to accept that it could not sustain its side of the 'murder competition'," he is engaging in

<sup>84</sup> Brubaker, "Ethnicity without Groups," 164 and 174-5.

reification.<sup>85</sup> Ethnic groups may not be real or on-going entities, according to Brubaker, but ethnicity may be used to make situational communities. Indeed, given that "groupness" is variable and contingent, ethnicity is an event -- something that may or may *not* happen.<sup>86</sup> Elizabeth Gilmour, who lived in Ardoyne, displayed the Union flag from her house in the run up to the Orange parades of July 1969. However, she also acted as a guarantor for a family from a different faith who wanted to move into her street, was a frequent visitor to the parochial house, and entertained Catholic priests in her front room.<sup>87</sup> Thinking about ethnicity as relational and dynamic leads on to questioning how useful the concept still is. Brubaker concludes that "we may end up not studying ethnicity at all."<sup>88</sup>

Todd regards Brubaker's arguments as a "revolution" -- and her response is to mount a counter-revolution.<sup>89</sup> While Ruane and Todd accept that ethnicity is a way of perceiving the world, they insist that "conceptual food" can fatten up this "thin category." In Ireland, religious, colonial, national, and other cultural and political institutions, practices, and beliefs

thickened and deepened an overarching ethnic division. The result was a "system of relationships" based on "cultural difference, power relations, and communal belonging"; each of these overlapped with and reinforced the others. Ruane and Todd trace the "moment of crystallization" to the end of the seventeenth century, when the "British Protestant minority" won their "definitive victory." The system provided strong inducements for actors to operate within its rules and not to step outside of them. These positive and negative feedback loops ensured that the system reproduced itself across time and absorbed external shocks such as "modernization, industrialization, and democratization." Elements were added and discarded over the centuries, yet the system kept the basic relations the same. Partition merely succeeded in limiting the system to the north east of the island. "[S]olidary, bonded, easily-mobilized populations with intense communal identification" were "emergent properties of the system." The strength and resilience both of the "Catholic" and "Protestant" communities and of the conflict between them was due to "systematicity" rather than to specific properties of "ethnicity."<sup>90</sup> The banners of the counter-revolution bear the motto: groups without ethnicity.

Ruane and Todd once more reduce politics to spume on the wave of history and treat peoples as transhistorical entities. What is different about their model, however, is that their groups are products of an institutionalized system. In theory, this system *could* shape politics and ensure continuity. Ruane and Todd ground their arguments in the ideas of path

---

<sup>90</sup> Joseph Ruane and Jennifer Todd, "The Roots of Intense Ethnic Conflict may not in fact be Ethnic: Categories, Communities and Path Dependence," *European Journal of Sociology* 45, no. 2 (August 2004): 209-232, at 216-20 and 224-7; Jennifer Todd and Joseph Ruane, "Path Dependence in Settlement Processes: Explaining Settlement in Northern Ireland," *Political Studies* 55, no. 2 (June 2007): 442-58, at 448-51.

dependence and rational choice.<sup>91</sup> Path dependency started out as a way of explaining the development and diffusion of technologies such as videocassette recorders. In the stretched version of path dependence, contingent events set into motion institutional patterns where increasing returns lead to equilibrium across history. But, the years from the Tudor conquest to the War of the Two Kings cannot at all fairly be seen as what the sociologist James Mahoney calls "a highly improbable concurrence of events."<sup>92</sup> The huge changes brought about during this period are more likely to be what is shaping later actions and identifications than are the system's mechanisms of reproduction. There are cracks in the second foundation, too. Humans have evolved to be social animals, acting on a sense of fairness instead of pursuing self interest.<sup>93</sup> Anyway, as Kahneman has shown, human rationality is bounded.<sup>94</sup> This path appears to be a dead end.

### **Democracy, Equality, and Conflict**

How, then, should the Troubles be explained? This article argues that it centered on a political conflict -- one over competing visions of modern democracy. Such a claim may seem odd at first, given that democracy tends to be viewed today as the basis for peace within and between states. However, even briefly studying the historical context in which modern

democracy was developed and debated shows how the concept can create conflict. In *Leviathan*, Thomas Hobbes reasoned that a political covenant can only take the form of an agreement in which each individual member of the throng contracts with every other one to authorize a single man or an assembly to act in their name. The many of the multitude becomes one through the "Unity of the Representer"; they now own in common all its words and actions. The political covenant thus brings into being two artificial persons: the author (the state) and the actor (the sovereign).<sup>95</sup> A century later, Jean-Jacques Rousseau embraced the Hobbesian notion of a unitary, absolute, and indivisible sovereign, while at the same time rejecting the idea that sovereignty could be represented. The "public person" formed by Rousseau's social contract is called "*State* when it is passive, *Sovereign* when active." The individual in this body politic is kept free from domination thanks to the rule of law, as "obedience to the law one has prescribed to one's self is freedom." For this to work, however, Rousseau had to imagine that his republic has a patriotic population of equal standing that shares the same morals; a separate government run by an elected aristocracy; a civil religion; and a set of fundamental laws put in place by a god-like "Lawgiver."<sup>96</sup> In other words, he had to imagine the impossible. "I see no tolerable mean," he subsequently conceded, "between the most austere Democracy and the most perfect Hobbesism."<sup>97</sup>

Nonetheless, at the start of the French Revolution, Emmanuel Joseph Sieyès believed that there was indeed an answer to Rousseau's "great problem of Politics." The solution was to see representation as the basis for liberty rather a threat to it: freedom was to come through association, not autonomy. In a commercial society, the production and consumption of goods, services, and ideas are based upon individuals having things done for them by representative labor. Humans have political needs, too, which are the same for everyone and can be met only through singular means. They therefore come together in a single body with a common will as a "nation" -- a term used by Sieyès, for tactical reasons, as a synonym for "state." When a nation grows in population and territory to a certain point, the real common will necessarily gives way to the representative common will. This is the "constituting power" -- that is to say, the sovereign -- which has been entrusted by the nation with creating a constitution. In turn, the "constituted power," the government, represents both the nation as a whole *and* its many different members. Representation links the public functions of the nation to the non-political activities of individuals; it also guards the lives and goods of the nation's members against abuses of power.<sup>98</sup> Five months after *What Is the Third Estate?* appeared, Sieyès and the other commoner deputies met without the first two orders, adopted

the name National Assembly, and swore an oath to sit until they had given France a new constitution.<sup>99</sup>

By the close of the eighteenth century, then, what Bourke classes as the "constitutive elements" of modern democracy -- "popular sovereignty and representation, the idea of the people and the concept of the state" -- were already in place.<sup>100</sup> So, too, were the controversies around which most modern political conflicts have centered. How should the fictional community of the state be imagined? What form should the representation of its sovereignty take? Both Hobbes and Sieyès had based the state/nation upon existing countries: composite monarchies whose borders had been shaped by military might, marriage, and maleficence. Since the state is the indirect sovereignty of the people and abstract representation is how that sovereignty is exercised, nothing other than politics is left to define the people. Such reasoning raises the problems of putting the political before the people and of promoting chance over choice. What were the people before the state was constructed? What will the people be after the state is dissolved? Are those individuals who are unhappy with where history has put the state's boundaries free to join together in pursuit of a state of their own choosing? Put simply, how should the people -- yet another abstract -- be imagined?<sup>101</sup>

In modern Ireland, these questions have produced a range of different answers over the years. For unionists, the United Kingdom is the state and the Crown-in-Parliament exercises sovereignty. Following the creation of Northern Ireland, unionists have tended to want the sovereign to devolve some public functions to the province. Nationalists claim that the Irish nation, understood as a cultural group, is the people: the Irish nation/people existed *before* the British state and thus has the right to secede from it to form a state of its own. Constitutional nationalists once campaigned to pool this sovereignty within a federal system. After partition, however, those in the North shifted their allegiance to an all-Ireland set up. Republicans aspire to establishing a state that is both wholly united and completely independent. The road they have been taking to the Irish Republic, though, keeps twisting around, branching off, and dividing them up. Physical-force republicans style themselves the provisional representatives of the people's will, holding its sovereignty in trust until such time as an all-Ireland vote elects a constituting power. Loyalists, during moments of insurrection, stretch democratic principles even further with their insistence that they know the will of the majority of the people.<sup>102</sup> This elides the distinction between a democratic government -- selected on the basis of the majority principle -- and a state -- understood as a contract of all with all.<sup>103</sup> Rejecting Hobbes and Sieyès altogether, revolutionary socialists hold that

humanity, which is to say, the workers of the world, needs to be free of both representation and the state.<sup>104</sup>

The secondary elements of modern democracy -- notably, the franchise and political parties -- introduced further complications and generated more conflict. The questions of who could vote in elections and of who could sit in legislative assemblies led to politically-organized sets of answers. Over the course of the 1820s, Daniel O'Connell's Catholic Association, which aimed at ending the Anglican monopoly on government, became what Richard English calls "the first truly popular, mass-democratic organization."<sup>105</sup> At the end of the century, the demand for women's suffrage provided an issue around which feminist activists built political campaigns and networks.<sup>106</sup> Extending the franchise beyond men of property changed the political system. The Second and Third Reform Acts, together with the advent of the secret ballot, made it possible for the Irish Parliamentary Party to return eight-six MPs in the 1885 general election.<sup>107</sup> But, this does not mean that, as Michael Walzer puts it, "bring[ing] the 'people' into political life" sees them "arrive...marching in tribal ranks."<sup>108</sup> Parties do not reflect pre-existing cultures or classes; instead, they claim to represent the

interests of their constituency. Yet again, representation is indirect: parties push their own constructions of those interests, often denying and excluding the ways in which individuals really view their wants and needs.<sup>109</sup> Indeed, parties -- along with other organizations such as state agencies, Churches, labor unions, interest groups, and paramilitaries -- are the principal actors in the drama of modern politics.<sup>110</sup> That said, people are not passive participants in this relationship, as they can seek to reform the parties which claim to speak for them or they can seek out another one of their own choosing. Moreover, parties themselves are made up of ambiguous relationships that are always in the process of being renegotiated.<sup>111</sup> During the autumn of 1966, backbench Unionist MPs staged a somewhat successful revolt against the party leadership for taking away functions from local councils and for taking decisions in an authoritarian manner.<sup>112</sup>

The concept of modern democracy not only generates conflicts, it can also work to turn them violent. Bourke argues that this "lethal potential" stems from democracy's "core value," equality.<sup>113</sup> "The equality in question," he writes, "involves 'equal' participation in

rule, meaning a proportionate, but not an identical, share."<sup>114</sup> Each individual assesses him- or herself against everyone else whom s/he encounters, striving to make the evaluation a favorable one and fearing that it may not be. The relentless human need to pursue status can be held in check by hierarchies. But, democracy, at least in principle, does away with political distinctions -- which, in turn, releases the egalitarian drive and gives rise to factional struggle. Bourke brands this "democratic vanity."<sup>115</sup> The provenance of this analysis goes all the way back to Aristotle and Thucydides. It was this common intellectual heritage that Edmund Burke was tapping into when he predicted that erecting a regime of equality to govern over a commercial society would mean "There must be blood." Revolutionary France would succumb first to "civil war" and finally to the rule of "some popular general."<sup>116</sup>

Recent research in the natural and social sciences supports this ancient wisdom about the dangers posed by democracy's core value. All the hunter-gatherer societies studied by anthropologists have been found to be egalitarian on the whole. Individuals still seek to raise their own status, but the rest of the community put back in his-or-her place anyone who tries to gain special treatment at the expense of others. Until some 10,000 years ago, when agriculture was invented, all the humans who had ever lived probably belonged to tribes that

practiced the "reverse dominance" identified by Christopher Boehm.<sup>117</sup> The result is that the mind has evolved to register unfairness in human relations and to seek out justice. This inference system often wins out over effortful logical reasoning, giving rise to an emotional need to have such actions punished, even if it comes at a cost.<sup>118</sup> To rework Gould slightly, a subjective appraisal that an informal social contract has been broken triggers most interpersonal violence. It is, to use the term coined by the biologist Robert Trivers, "moralistic aggression."<sup>119</sup> The core value of democracy therefore places at the heart of modern politics the main mechanism for turning human relations violent. So, when efforts to bring about a particular vision of democracy are frustrated -- something which the difficulty of the questions posed by the concept makes nearly certain -- a self-righteous fury can be set loose. If this cannot be cooled by either the political system or the constitutional set up, one or more organizations may well seek to assert their view of equality through a direct act of "the people." "But," writes Bourke, "one rarely restores a democracy by means of revolution. More usually, one starts a civil war."<sup>120</sup>

On 7 June 1971, John McKeague began giving evidence in camera to the Scarman Tribunal, which was inquiring into the civil disturbances that had happened two years earlier. Leslie Scarman had cleared the court "so that Mr. McKeague cannot suffer any prejudice."<sup>121</sup> McKeague was happy to inflict his own prejudices upon the tribunal, referring from the start of his answers to "Taigs," "Papists," and "Popeheads" and reveling in the chance to recount his violent deeds. Nonetheless, throughout a series of cross-examinations, he kept insisting that his passionate words and actions were based on principles of allegiance. McKeague was striving to defend "the Crown and Constitution" to which most of the population was loyal. "The majority...always rules." However, "under the British Constitution," minorities still had "the same political and civic rights and duties." "[A] Jew can come into this country," he explained, "[and] he can practise his religion and beliefs and still accept the Crown and the Constitution." So, too, could "any political or religious organisation." McKeague also conceded "the right of people in Northern Ireland to campaign by peaceful methods for a change in its Constitutional establishment." He was not fighting "Nationalists" but rather "rebels" "who have been using any force whatsoever -- subversive -- towards the Constitution." McKeague's targets were essentially victims of ideological violence. Moreover, he was doing this as only "a very small part" of "the people." They had "arisen" to "shake the Stormont Government...into action that should have been taken."<sup>122</sup> McKeague's use of religious slurs does not mean his behavior was an automatic emotional response; he was acting on the basis of legitimating conventions and denying that his opponents were

doing the same. His fanaticism, then, was nothing other than an assertion of democratic vanity.

The protagonists in the conflict on the streets of Belfast during the summer and autumn of 1969 all had opposing claims to democratic legitimacy. On 8 August, Home Secretary Jim Callaghan warned the Stormont Cabinet that "the United Kingdom Government would have to demonstrate that it had final responsibility."<sup>123</sup> A week later, Patrick Hillery, the Minister of External Affairs, paid a visit to Whitehall to press the Irish Government's case for "your troops and ours [to] be combined together to form a peace-keeping force" and for "a constitutional conference." He "did not accept that the North was an internal matter for the United Kingdom": "Northern Ireland is part of Ireland."<sup>124</sup> The leaders of the Unionist Party pushed back against what they saw in both cases as unwarranted interventions in their affairs. At a press conference on 17 August, Prime Minister James Chichester-Clark pointed out that his government had "a parliamentary majority elected on 'one man, one vote'". He urged that the "will" of the "sovereign authority of Westminster" had to be balanced against that of "a majority of Ulster people." As for Dublin, Chichester-Clark compared its "deplorable" behavior to "those hooligans who have used the present troubles as an excuse to burn their neighbours out." This had worked to "inflame opinion," inspiring the "political Opposition," who were against "the very existence of the State," to turn parliament into a "mere forum for wrangling." Of even greater concern was how this "very squalid

business" had aided "the activities of extreme Republican elements."<sup>125</sup> The IRA Chief of Staff portrayed the use of its "all too limited resources" as having been "an attempt to hold off the terrorist forces of reaction." These "legitimate" actions had been carried out by "the provisional government of the Irish Republic."<sup>126</sup>

Due to an upsurge in grassroots organizing, the main actors found themselves joined on the political stage by a huge supporting cast. Local groups with a range of names -- action committees, peace committees, defence associations, and so on -- sprang up across Belfast, beginning in the west and north. Political activists were often involved, yet they were rarely in control. Although Republicans had helped to create the Ardoyne Citizens' Action Committee in late May 1969, a crowd of locals soon afterwards confronted them and forced them to quit.<sup>127</sup> By the time the British army was committed, soldiers were marching into "a complicated and ever-shifting maze of street politics."<sup>128</sup> To a certain extent, as Sieyès had

once feared happening to France, Belfast was breaking up into little republics.<sup>129</sup> The Ballymacarrett Citizens' Defence Committee sent representatives to negotiate with the authorities about "matters affecting the people." After a deal was reached, it "was presented to a meeting" and "was approved unanimously."<sup>130</sup> Across the river, a number of groups were brought together by Jim Sullivan, the Belfast IRA's second in command, in the Central Citizens' Defence Committee (CCDC).<sup>131</sup> Republicans, however, could not control this umbrella body anymore than they could the Ardoyne Citizens' Action Committee. Balancing them out was a Church faction, which the hierarchy closely supervised. The CCDC was so split that its members frequently allied themselves with a range of outsiders in their attempts to get their way.<sup>132</sup> Important decisions, such as whether to put up or to take down barricades, had to be made independently by local committees.<sup>133</sup> On the Shankill Road, there was not even the appearance of unity, with factions openly contesting each other's claim to speak for "the people." McKeague's Shankill Defence Association (SDA) competed with, among

Republicans adapted by putting up along the Falls Road posters that urged people to "reinforce their barricades."<sup>139</sup> Riots, as a military analysis concluded, were produced by a "militant, extremist leadership."<sup>140</sup>

By the middle of September 1969, the general officer commanding, the Royal Ulster Constabulary (RUC) Special Branch, and the Joint Intelligence Committee (JIC) had all agreed that the SDA and the Ulster Volunteer Force (UVF) were most likely to be the authors of the next "major" disorder.<sup>141</sup> During early October, reports came in that both organizations were indeed planning multiple demonstrations to stretch the security forces and that Loyalists had smuggled a cache of arms in from Sweden. The pretexts for taking to the streets were rumored to be the use of CS gas, McKeague's arrest, and soldiers fraternizing with local women. Finally, on the night of 10/11 October, Special Branch received solid intelligence that the Loyalist plan to "confront" the military was about to be put into action. Starting with women and children sitting down in the way of lunchtime traffic, the sequence of protests kept closely to the timetable acquired by Special Branch ("Next performance scheduled for 1800"). As the day got darker, the RUC struggled to shield Unity Flats -- seen by Loyalists as an IRA citadel -- from a crowd of around 2,000 men. With the pubs letting out Saturday-night drinkers, the police called in the army. Missiles were met with CS gas, smoke drew gunfire and petrol bombs, and automatic weapons were countered with armored vehicles. The battle between British soldiers and suspected ex-servicemen went on until dawn, by which time

Loyalists had let loose in excess of 1,000 rounds. Following up their advantage, the security forces carried out a search operation later that morning. It captured "two petrol bomb factories, a small supply of arms and ammunition, and equipment and literature belonging to Radio Loyal Ulster."<sup>142</sup>

"Events," judged the 39 Infantry Brigade INTSUM, "had been pre-planned."<sup>143</sup> The scholarly consensus, however, is that the protests and violent acts were largely spontaneous: an emotional reaction from "Protestant Belfast" to the publication of the Hunt Report on policing, not least its proposal to do away with the Special Constabulary.<sup>144</sup> This distorted view is the result of inadvertently looking at developments through a national or ethnic

optic.<sup>145</sup> Historians have to work with the traces of the past that survive into the present and activists have worked hard to construct narratives that endure. Writing about Imperial Austria, Judson shows how nationalist politicians and journalists kept recasting incidents that were "structured, limited, and planned" as evidence of "widespread" and "enduring" "nationalist frustration." The logic of this interpretation, then, was that different communities had to be kept apart or they would tear each other apart -- and it was "so flawless that most historians have agreed with it."<sup>146</sup> Much the same has happened in modern Irish historiography. Loyalist weakness at the start of the Troubles has thus been mistaken for strength. The Shankill's self-proclaimed defenders for their own partisan purposes had chosen to bring the war home to an area that was "relatively peaceful." They were producing violence to build support. Other people certainly did join the SDA and UVF to confront the security forces, but they were mostly drunks, petty criminals, and curious onlookers, who drifted away when the gunmen began to use them as human shields.<sup>147</sup> As for the young women whose honor the Loyalists were guarding, "girls returning home from a dance" told reporters "they would have to spend the night in the street."<sup>148</sup> The relationship between Loyalist organizations and the individuals they claimed to represent was at best ambiguous

and at worst abusive and absurd. It was the same with Republicans: in Ballymurphy, for instance, the IRA intimidated locals who owned licensed firearms into handing the guns over to "their" defenders.<sup>149</sup>

The writer Hugh Shearman noted how "modern inventions" were making the street fighting very different from that which he had witnessed in the 1920s. He picked out as examples "the materials for making petrol bombs" and the transistor radios "for rallying support for a riot."<sup>150</sup> The movement of people, goods, and ideas was, as usual, driving change. But, by the late 1960s, Belfast had been integrated into a different "Market Empire": the web of networks traced by America's power and influence in the world. A conveyor belt of innovative products, Washington's championing of free trade, and the dynamic marketing campaigns of American firms enmeshed Western Europe in consumer-oriented capitalism.<sup>151</sup> The global vectors that came together as they passed through the local terrain of Belfast not only created new street-fighting techniques, they also created new spaces for the fighting and new identifications for those on the streets. Tower blocks, housing estates, motorways, airwaves, nightclubs, and an expanded university became sites of conflict. Moving from place to place and hanging out in specific spots across this urban landscape were teenagers: young people who, through consumption, had imagined themselves into a global youth culture. Young women wore miniskirts on both the Falls Road and the Shankill Road and

Belfast had grown its own beat-music scene.<sup>152</sup> New fashions, music, and lifestyles offered ways of engaging in self-invention; democracy's egalitarian drive led individuals in a variety of sub-cultures to struggle for the freedom to be their authentic selves.<sup>153</sup>

During the summer of 1969, Fr Marcellus Gillespie, who liked to wear black jeans and a leather jerkin, tried to harness youth culture to counter the activities of Republicans and Loyalists. On 2 August, Gillespie -- along with two nightclub promoters, a music journalist, and a Labour politician -- staged the free "Pop for Peace" festival for a crowd of at least 5,000 in parkland ringing the city. John Lennon and Yoko Ono sent a telegram from their Montreal bed-in ("All we are saying is give peace a chance."), BBC Radio 1 lent support, and the chart-topping Marmalade headlined the event. More teenagers danced at Pop for Peace that afternoon than rioted in west and north Belfast that night. SDA members were the prime movers in this violence and the organization had earlier tried to intimidate the National Trust into backing out of hosting the festival. For Loyalists, Pop for Peace was not just a threat to their street politics, it was also part of a plot orchestrated by Lennon and Moscow to overthrow Stormont.<sup>154</sup>

While this was fanciful, leftists -- who were themselves more of a scene than an organization or movement -- did indeed have hopes that youth culture could work as a bridge to political involvement. The newsheets and radio programs they produced from behind the barricades of Free Belfast drew upon the words, sounds, and images of the international counterculture. A satirical attack on two Special Branch officers, for instance, ended with "the boys in Hooker Street" asking to hear "Gratefully Dead" by the psychedelic-rock band Eric Burdon and The Animals.<sup>155</sup> Leftists attempted to argue that political concerns, too, had become transnational. "The human rights we are seeking are the rights people all over the world are entitled to," declared the *Citizen Press*, "whether he be the negro in America [or] the Czech in the face of Russian Imperialism."<sup>156</sup>

Connections, concrete and imagined, could cause understandings of space to expand to encompass the globe, but they could also lead them to shrink down to a single street. "We were born and raised with each other up here," said one interviewee in an article on The Bone and Louisa Street from early August 1969, "it's like a family."<sup>157</sup> West and north Belfast was made up of many such spaces. Shopkeepers, publicans, and bookmakers lived together with workers and in some districts, including The Bone and Louisa Street, so, too, did people of different Christian denominations. Religious divisions did not in and of themselves produce

conflict. A woman, whose husband was both an engineer and a B Special, gave evidence to the Scarman Tribunal that she would go to the launderette on Clonard Gardens off the Falls Road every Monday and have "fine good times" "gossiping" with her "Roman Catholic neighbours."<sup>158</sup> Further north, on a small street close to the Shankill Road, a Roman Catholic mother told an interviewer from the United States that her "Protestant neighbors" were "good women" and that her daughters "play[ed] with Protestants."<sup>159</sup> In Ardoyne, older children and teenagers mixed socially at an interdenominational youth club.<sup>160</sup> While a lot more research remains to be done here, the evidence does suggest that these were situational communities based on place rather than class or religious identifications. For a Roman Catholic man from Leopold Street who worked and drank with Protestant from the Shankill, Orange parades were just "a seasonal thing, it was like water going off a duck." His family's everyday life was usually "happy."<sup>161</sup> The members of these communities looked out for each other, sharing the struggle against the common threats of poverty and insecurity. A woman from Hooker Street recalled at the Scarman Tribunal how her family cared for a sick man who lived a few doors down and took in a girl when her mother worked weekends -- even though both these people subscribed to a different faith from her family.<sup>162</sup> Formal institutions may have been organized on a denominational basis, but informal institutions could cross the religious divide. Like residents of northern England's industrial towns and London's deprived

"I don't fear a mob," said "Paddy" to the *Belfast Telegraph* in early August, "But when they have meetings and walk up the street making a list of houses to be cleared, it is different." His "heartbroken" "Protestant neighbours" had tried to help the family, but they, too, were "threatened."<sup>169</sup> McKeague almost certainly burned Elizabeth Gilmour out of her house in Ardoyne, so he could blame "rebels" for the outrage and justify taking reprisals.<sup>170</sup> (One of her Roman Catholic neighbors secured her damaged property to keep out looters.)<sup>171</sup> Republicans were also menacing some of the people they had vowed to defend. During early August, an IRA-front organization advised a number of families on Hooker Street to leave for their own safety and provided a truck for them to move their furniture. Soon afterwards, many of these families returned to their homes.<sup>172</sup> A Roman Catholic widower who did not want to leave the house in the Shankill he had lived in "for most of his 71 years" had his windows boarded up by three local men ("I believe in the text 'Love thy neighbour'").<sup>173</sup> Groupness events usually involved neighbors coming together to support each other; different communities were not in conflict.

Across the river in east Belfast, where the fighting of the 1920s had begun, this pattern was much more pronounced. On 19 August, the *Guardian's* Simon Hoggart found Roman Catholics and Protestants "visiting each other, exchanging news and cups of tea."

Hoggart credited the East Belfast Peace Committee with keeping these "friendship[s] warm."<sup>174</sup> This self-styled "army of moderation" drew its 300-or-so volunteers from, in the words of one of them, "all classes, all denominations, old people and young people, and all political opinions." It put on nightly street patrols, organized a drop-in center, ran a 24-hour telephone help line, produced a bulletin to counter rumors, and collected 12,000 signatures for a "peace petition." The chair of the committee had strong links to the shipyard trade unions, which were encouraging their members to continue to get along with each other inside as well as outside work.<sup>175</sup> At a meeting called by the shop stewards on 15 August, thousands of workers passed a resolution expressing their "determination to maintain peace and good will."<sup>176</sup> The police officer in charge of the area praised the trade unions at the Scarman Tribunal for ensuring there was "no violence of any kind between opposing factions or individuals in the shipyard."<sup>177</sup>

As the situation continued to deteriorate in north and west Belfast, however, acts of resistance gave way to making the movement of people more orderly and less violent. Committees backed by clergymen from a range of denominations oversaw exchanges of houses and ministers opened up their churches and halls to provide shelter for those with nowhere to go. Neighbors watched over the property left behind and helped redecorate new

homes.<sup>178</sup> In Dover Street, next to the Shankill Road, the leader of the local vigilantes, a grocer, blocked squatters from taking over the furnished Cunningham house so as to give his regular customers the chance to return. Lily MacNeill, who had "Protestant in her own family," did return to her home in nearby Ardmoulin Avenue -- but, she told an American reporter, "I don't see how I can stay."<sup>179</sup> Violence had broken up neighborhoods. On 19 August, "an Ardoyne resident" "took a long walk through the district where [he] was born and reared" and "got the impression many friendships have been lost."<sup>180</sup>

Belfast's neighborhoods were like families -- and like families they had their conflicts. On the streets of the city, both the pursuit of status and the scrutiny of behavior were open, daily, and intense.<sup>181</sup> This produced conflicts, which sometimes became violent. The Troubles greatly increased the likelihood of intimate violence, as the disruption made it more difficult for individuals to coordinate their understandings of the world with each other. Efforts to address the problem through gossip only served to undermine civic cohesion even further.<sup>182</sup> Rumors scared people into fleeing their areas, deceived them into supporting the stratagems of militant organizations, led them to suspect public services, and made them

distrust information provided by the media and the authorities. 39 Infantry Brigade started running an internal "Rumour of the week" competition; the winning story one week was that Loyalists were tunneling under Unity Flats.<sup>183</sup>

Individuals who experienced moralistic aggression could choose to take direct action against their targets. With some people believing local communities needed to police themselves, outsiders -- especially alleged child abusers -- received verbal threats and physical assaults. Intimate violence arising out of seemingly trivial matters was much more common.<sup>184</sup> A man feuding with his neighbors in the Shankill set his dog on the couple and a dispute over car parking in Clonard led to a threat of slashed tires. Tensions within one family living in Ardoyne turned violent when a man set fire to his mother-in-law's clothes. The connections between intimate violence and the overarching conflict could be direct, too. Vigilante patrols sometimes quarreled among themselves and these rows could escalate quickly from exchanging insults through trading punches to firing bullets.<sup>185</sup> By far the most popular way of trying to put someone back in their place, though, was to use the communication networks provided by state agencies. "The spate of threatening telephone calls and letters," recorded the 39 Infantry Brigade INTSUM for the start of September 1969,

"now embraces the whole of Belfast."<sup>186</sup> Every neighborhood in the city, regardless of its religious or class makeup, was conflictual; however, only those districts where the British army and paramilitary groups were present had serious incidents of interpersonal violence. This was because moralistic aggression could be expressed indirectly here. Pirate radio stations delivered numerous threats to named individuals over the airwaves.<sup>187</sup> The army received tip offs from the public that sent soldiers across west and north Belfast on raids -- the usual result of which was simply a terrorized household.<sup>188</sup>

The politicization of private life and the privatization of politics had the heaviest impact upon young women.<sup>189</sup> That so many people came to believe the rumor that the army had set up "courting facilities in troubled areas of the city" was a reflection of how strong the sense of sexual threat was.<sup>190</sup> These concerns were not entirely exaggerated; a few soldiers did prey upon underage girls.<sup>191</sup> Nonetheless, some individuals were using claims to be defending virtue to justify dealing out violence. Over the course of autumn 1969, two

teenagers with boyfriends in the army had their hair cut off -- one had it done to her by her own mother and attempted suicide afterwards.<sup>192</sup> The Troubles handed domestic abusers excuses and weapons: this was what a judge ruled in the case of a man who had hurled a petrol bomb at his long-term girlfriend's home (he missed and set fire to another house).<sup>193</sup> However, the Troubles also offered women in violent relationships ways of fighting back, as they could now enlist soldiers into their service. The army was called upon to get property back from an ex-boyfriend, to evict a man just out of prison who had kicked in the door to his wife's house, and to "keep an eye" on an abusive husband. Exploiting the premium on information, one woman telephoned in a tip off that her IRA boyfriend kept guns at home and had robbed a Dublin bank.<sup>194</sup>

The blending of public and private was at play in the activities of paramilitaries, too. Individual state agents were typically targeted for personal reasons as well as for the uniform they wore. Ex-prisoners with long memories stabbed a retired guard, the SDA sought revenge on a corporal who had struck Loyalists with his rifle butt, and the army had to rescue a "despised" RUC man before he was shot on the Falls.<sup>195</sup> Pubs were attacked by militants because they were the headquarters for rival groups; they were also selected because they

were business competitors and stocked with liquor to loot.<sup>196</sup> In the neighborhoods that militant organizations were seeking to control, claims on money and goods came with the claimed protection. East Belfast shopkeepers had to "subscribe to the vigilantes' tea fund" and residents of the Falls had to provide packs of cigarettes.<sup>197</sup> While some were taking, however, others were giving back: Sullivan returned lots of stolen goods, including a sub-machine gun belonging to the Royal Hampshire Regiment.<sup>198</sup> The mixture of motives held by paramilitary members was different for each individual and they varied across both time and space. What appears to have been common to most people in most moments, though, was the pride taken in participating with others in a struggle against great injustice. Processes mattered more than outcomes.<sup>199</sup> There were no rational, self-interested actors in the militant organizations fighting in Belfast.

The first British soldier shot dead during the Troubles does not appear in *Lost Lives*; Craftsman Christopher Edgar is absent from the book because he chose to kill himself.<sup>200</sup> Before his suicide on 14 September 1969, Edgar had written home that the tour had left him feeling "like a zombie."<sup>201</sup> Six weeks later, another soldier with depression had a psychotic episode. He climbed on to the roof of Albert Street mill, took off his uniform, and fired his rifle towards the Lower Falls. Thanks to Sullivan's co-operation, the army was able to contain the situation and convince the soldier to leave the roof without anyone getting hurt.<sup>202</sup> Internal conflicts such as the ones endured by these two men disrupted emotional regulation; this, in turn, made aggression and violence much more likely.<sup>203</sup> Troubled minds played a part in producing the violence of the Troubles and the violence of the Troubles played a part in producing troubled minds. As early as the end of August, family doctors were already "flooded" with patients suffering from depression, anxiety, and dissociative disorders.

Another familiar way of coping with hidden harm -- teenage firesetting -- became a problem the following month.<sup>204</sup>

The Troubles, even in its first year, was a constellation of conflicts. Some were confined within a single head, others stretched across the globe; some were lonely struggles, others affected millions of people; some were over in minutes, others lasted decades. These multiple dynamic and intersecting conflicts were arrayed around a central conflict, the one over rival conceptions of democracy. It was when this conflict turned violent -- a difference in kind, not of degree -- that violence started to be deployed much more in other conflicts, too. Civil war broke buildings, bodies, and brains. But, the violence of the Troubles was creative as well as destructive: individuals and organizations responded to it by constructing new identifications, institutions, and ideas. These processes had logics of their own, giving rise over time to conflicts that were barely connected to those charted in this section. The original issue in contention, however, was not marginalized. Indeed, the conflict over the meaning of popular sovereignty has continued to structure public life into the peace-process era.

## **Conclusion**

The M1 motorway was carved through west Belfast at the end of the 1950s and the start of the 1960s. Its planners had set out to make travelling to and from the center quick and easy. In a similar fashion, ethnic readings of the Troubles have promised a simple way to cover a

lot of ground in a short space of time.<sup>205</sup> When moving at such speeds, the complex interactions of the local and the transnational, the individual and the collective, and the personal and the political going on in the surrounding streets blurs into just one conflict. It looks as if whole communities have been struggling for mastery. Residents of west Belfast had been largely powerless to stop the M1 getting built, but stopping the traffic now gave them some power. From the summer of 1969 onwards, sit-down protests and barricades regularly closed down motorway junctions.<sup>206</sup> This article, likewise, is an attempt to disrupt the smooth flow of the ethnicity freeway. Slowing scholars down gives them the chance to look more closely at what happened in the city's neighborhoods. And once the complicated patterns have been spotted amid the rows of houses and blocks of flats those who find them, hopefully, will not be blind to them again.
